access layers

Portnox™ by Access Layers represents a new approach to Network Security, providing complete control of all IP devices regardless of how they access the corporate network. Portnox allows network administrators to configure access parameters for physical network ports or devices, determining which devices are allowed access, and to what.

- 1) Identifying if devices connected to the network are 'part' of the network (a company known device and not a rogue device)
- 2) Insures that each application device complies with the company network access security policy

With Portnox, the most vulnerable point in your corporate network, the physical network switch, is monitored at all times, providing you with a centralized switch monitoring and management solution that fully protects the corporate network - from 'the inside'

Quest Software's award winning TPAM Suite provides Privileged Access Management Solutions for Automated Password Change Controls, Secure Password Storage, Full-Session Recording & Compliant Monitoring of Access to Critical Systems.

Privileged Password Management: Password Auto Repository (PAR) is an award-winning dedicated appliance-based solution for the Secure, Compliant Management & Control of all shared/privileged accounts and hard-coded script/application passwords.

Privileged Session Management: eGuardPost provides a secure, auditable solution for managing privileged user access to internal systems, with full session recording and playback options.

Privileged Command Management: Unique, configurable privileged command capabilities provides granular management & control of privileged user activity down to the command level.

Lumension delivers unified protection and control solutions via a proven, Positive Security Model that simplifies security management to provide definitive protection of enterprise data and IT assets, improve operational efficiencies, reduce costs and accelerate business results.

Lumension's award-winning product portfolio includes the best-of-breed, policy-driven solutions that address all areas of the security management lifecycle

Breaking the Modern Malware Infection Lifecycle

FireEye is the world leader in combating advanced malware, zero-day and targeted APT attacks that bypass traditional defenses, such as next generation Firewalls, IPS, AV and Web gateways.

The FireEye Malware Protection System is the industry's first solution that breaks the full Modern Malware infection lifecycle stopping zero-day attacks and outbound callbacks while inoculating networks from future attacks. FireEye blocks the 90% of Modern Malware attacks that conventional defences miss. It features near-zero false positive rates for a rapid security ROI.

Prolexic - Distributed Denial of Service (DDoS) attack prevention

Prolexic Technologies provides class-leading global DDoS mitigation service that protects Internet operations from the debilitating service disruptions caused by DDoS attacks.

Prolexic offers class-leading Network Protection Services, globally, and has built a network of people, a wealth of knowledge and experience, and an availability of channel partners to ensure that the most advanced and reliable DDoS mitigation services in the world are easily accessible to online businesses.

Venafi™ Encryption Director™ is an enterprise-wide encryption management platform that centralizes and automates the management of encryption assets (keys and certificates) throughout the IT infrastructure, across diverse encryption systems, operating environments and applications.

Director automates the SSL certificate management and enterprise key management processes necessary to ensure proper data protection and regulatory compliance, including discovery, monitoring, alerts, lifecycle management and automated application configuration.

WhiteOPS™ provide solutions for the organization's mission-critical business applications rely first on next generation Business Asset Monitors (BAMs).

Whitebox WhiteOPS supports a wide variety of leading infrastructure systems (Operating systems, application servers etc.), mission critical business applications (ERP, CRM etc.) and third party integration.

Whitebox Security solutions are certified by the software vendors and integrate seamlessly with the organization's security infrastructure and business applications.
